Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present sequence represents an epitope-bearing portion of human fibroblast growth factor-21 (FGF-21). FGF proteins regulate growth and differentiation of a variety of cell types. FGF-21 nucleic acids and polypeptides are useful for treating diseases and disorders characterised by inadequate numbers of hepatic cells, preferably cirrhosis of the liver. They may also be used in the treatment of infertility, impotence, and testicular cancer, as well as leukemia, lymphoma, autoimmune disease, or proliferative disorders of the thymus
                                                                                                                                                                                                                          AAB68418 standard; peptide; 16 AA

nucleic acid molecule useful for treating disease, e.g. infertility, Fibroblast growth factor-21, FGF-21, cell growth, cell differentiation, hepatic cell, cirrhosis, infertility, impotence, testicular cancer, leukemla; lymphoma; autoimmune disease, thymus proliferative disorder. Epitope-bearing portion of human fibroblast growth factor-21 (FGF-21). Claim 17; Page 39; 61pp; English. impotence, or testicular cancer. 18-NOV-1999; 99US-0166540P. 16-NOV-2000; 2000WO-US031745 23-JUL-2001 (first entry) Itoh N, Kavanaugh WM; (CHIR ) CHIRON CORP. (KYOU ) UNIV KYOTO. WPI; 2001-343823/36.

A polypeptide of the invention has antidiabetic, anorectic, cardiant, hypotensive, antiarteriosclerotic, anorectic, virucide, antibacterial, fungicide, protozoacide, nootropic, neuroprotective, antiparkinsonian, anticonvulsant, osteopathic, antiarthritic, antiinflammatory, dermatological, antiasthmatic, antilathriticy. A polymucleotide of the invention may have a use in gene therapy. The polypeptides, nucleic acid molecules and antibodies
                                                                                                                                                                                                                               antiarteriosclerotic; anorectic; vincide; antibaccerial; fungicide; protozoacide; nootropic; neuroprotective; antibaccerial; fungicide; protozoacide; nootropic; neuroprotective; antibarkinsonian; dermatological; nottasthmatic; antilipaemic; gene therapy; fibroblast growth factor receptor 4; FGRA; complement factor I precursor; matrix metalloproteinase-15 precursor; MDC3; T-lymphocyte surface antigen Ly-9 precursor; fibroblast growth factor-21; FGF-21; antileukoproteinase-1 precursor; antileukoproteinase-1 precursor; LY-1; nuclear hormone receptor NOR-1; transmembrane protein-like; beta-neoendorphin-dynorphin precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's disease, asthma, or infections.

are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases such as metabolic disorders, diabetes, parkinson's disease, variatious diseases (viral, bacterial, fungal, conferential, atherosclerosis), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), incurdegenerative disorders, Alzheimer's disease, Parkinson's disease, epilopsy, immune disorders and polypeptides consertaritis), haematopoietic disorders, inflammatory skin disorders, asthma, and various dyslipidaemias. The nucleic acids and polypeptides conservable. The medulate or inhibit e.g. neurogenesis, call differentiation, cell proliferation, haematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to Novx substances for use in therapeutic or diagnostic methods. The nucleic acids are further used a hybridisation probes, in chromosome mapping, trissue typing, preventive medicine, and pharmacogenomics. The NovX polypeptides of the invention show homology to certain known human conference in Nov2a shows homology to fibroblast growth factor receptor (FGFR4); Nov2a-5c show homology to tiproblast growth factor receptor (FGFR4); Nov7a-7c show homology to alpha-2 macroglobulin-like conference in the antibute of polypeptide variants; Nov8a-5c show homology to alpha-2 macroglobulin-like conference in the protein-like; Nov1a-11; show homology to contain shows hom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -dynorphin precursor. ```

```
The present invention describes an active variant (1) of a fibroblast C growth factor (FGF) having at least one mutation in the beta-8-beta-9 (1000), having enhanced specificity for one receptor subtype compared to the corresponding wild type FGF, by decreasing the biological activity andiated by at least one receptor subtype while retaining the activity of mediated through another receptor subtype. (1) has cytostatic, vulnerary, osteopathic and antiarthritic activities. (1) can be used as a regulator of vasculogenesis or angiogenesis. (1) is useful for preparing a bnormal FGF receptors (FGFRs), especially skeletal disorders, cancer, to canhance bone fracture healing or bone growth processes and wound healing processes. (1) is useful in detection and treatment of various FGFR crelated disorders including skeletal disorders e.g. achondroplasia, crelated disorders such as transitional cell carcinoma of the bladder and cervical carcinoma. The novel mutants are useful in high expression systems suitable for pharmaceutical production, targeting of drugs or other agents to tissues and cells having specific FGFR subtypes, and serve as template for pharmaceutical production, targeting of and serve as template for the formations such as skeletal disorders and antegonists of FGFRs in various figoroes agonists of farsue and calls may as skeletal disorders and cancer. The present sequence represents a FGF core structure amino acid sequence which is given in the exemplification of the present invention

```
The invention relates to a novel isolated polypeptide (NOVX) comprising a mature form of any of the 37 amino acid sequences fully defined in the specification. A polypeptide of the invention has antidiabetic, ancrectic, cardiant, hypotensive, antiarteriosclerctic, anorectic, cardiant, hypotensive, antiarteriosclerctic, anorectic, cardiant, hypotensive, anticonvulsant, osteopathic, neuroprofective, antiparkinsonian, anticonvulsant, osteopathic, antiarchritic, antiparkinsonian, anticonvulsant, osteopathic, antiarchritic, antiparkinsonian, anticonvulsant, antiachmatic, and antibodies antiarchritic, antificammatory, dermatological, antiachmatic, and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. C associated with a human disease, preferably a NOVX-associated disorders. C associated with a human disease, preferably a NOVX-associated disorders. C disbertes, obesity, infectious diseases uch as metabolic disorders. C dispertension, arberoclarcial, indections diseases uch as metabolic disorders, helminthic, and protocolars is an electrical, fungal, belinthic, and protocolars is an electrical, fungal, helminthic, and protocolars, ellipseptides and antibodies are used as targets for the identification of small molecules (osteoarthritis), haematopoietic disorders, inflammatory skin disorders, asthma, and various dyslipidaemias. The nucleic acids and polypeptides of the invention of antibodies that bind immunospecifically to NoVX substances for use in therapeutic or disorders, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The NOVX substances for use in therapeutic or disorders, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The NOVX polypeptides of the invention show homology to certain known human protoceinas homology to complement factor I precursor, NOV3 shows homology to complement account of through antiquent believed to the protocolar show homolo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ly-9 precursor; NOV6a-6m show homology to fibroplast growth factor-11 (FGF-21); NOV7a-7c show homology to alpha-2 macroglobulin-like polypeptide variant; NOV6a-8g show homology to antileukoproteinase 1 precursor; NOV9a-91 show homology to LIV-1 protein; NOV10a shows homology to nuclear hormone receptor NNR-1; NOV11a-11j show homology to transmembrane protein-like; NOV12a-12c show homology to beta-necendorphin dynorphin precursor. The present sequence represents a NOVX polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of the invention.

The sequence represents a fragment of a fibroblast growth factor-like

(FGF-like) polypeptide. FGF-like protein and its associated mucleic acid

(FGF-like) polypeptide. FGF-like protein and its associated mucleic acid

contains a role in modulating body growth, maturation or life-span. They are

also useful for treating, preventing or ameliorating disorders such as

cirrhosis, inflammatory bowel disease, mucositis, Crohn's disease,

ciabetes, obesity, gastrointestinal abnormalities, neurodegenerative

diseases, damage to renal tubules as a result of acute tubular necrosis,

chaematopoietic cell reconstitution following chemotherapy, wasting

syndromes (e.g., cancer associated cachexia), admage to the corneal

cepithelium, lens or retinal tissue, multiple sclerosis, myopathies, short

cepthelium, lens or retinal tissue, multiple sclerosis, myopathies, short

contains a structuration, alopecia, abnormalities of androgen target organs,

bronchopulmonary dysplasia, acute respiratory distress syndrome, tumours

cof the eye or other tissues, atherosclerosis, hypercholesterolemia,

cof the eye or other tissues, atherosclerosis, hypercholesterolemia,

cof the eye or other tissues, atherosclerosis, cardiac function, immune system dysfunction, cancer, Parkinson's disease,

cardiac function, immune system dysfunction, cancer, Parkinson's disease,

senile dementia, Alzheimer's disease, and decreased cognitive function
neurodegenerative disease; haematopoietic cell reconstitution; cachexia; chemotherapy; corneal epithelium damage; retinal tissue damage; myopathy; multiple sclerosis; short stature; delayed maturation; excessive growth; acromegaly; premature maturation; alopecia; bronchopulmonary dysplasia; androgen target organ abnormality; respiratory distress syndrome; stroke; cancer; atherosclerosis; hypercholesterolaemia; osteoporosis; baldness; osteoarthritis; muscle atrophy; sarcopenia; wrinkles; increased fatigue; decreased stamina; decreased cardiac function; immune system dysfunction; parkinson's disease; Alzheimer's disease; decreased cognitive function;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated fibroblast growth factor-like polypeptide useful for treating, preventing or ameliorating cirrhosis, inflammatory bowel disease, mucositis, Crohn's disease, diabetes, obesity, stroke and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Fibroblast Growth Factor; FGF; treatment; cirrhosis; mucositis; diabetes; inflammatory bowel disease; Crohn's disease; obesity; tubular necrosis; renal tubule damage; gastrointestinal abnormality; wasting syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fibroblast growth factor-19% polypeptides and polymucleotides useful for diagnosis, prevention, treatment of proliferative, differentiative, tumorigenic disorders such as tumor, psoriasis, rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes the protein and coding sequences of the human fibroblast growth factor (FGF) 19 homologue FGF19X, the former of which is shown here. The sequences can be used in the prognosis and treatment of proliferative diseases such as cancer, restenosis, psoriasis, rheumatoid arthritis and Dupuyrren's contracture, as well as to stimulate cell growth for treating neurological disorders such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human Fibroblast Growth Factor-like (FGF-like) polypeptide fragment.

The invention relates to a novel isolated polypeptide (NOVX) comprising a mature form of any of the 37 amino acid sequences fully defined in the specification. A polypeptide of the invention has antidiabetic, an anoretic, cardiant, hypotensive, antiarteriosclerotic, anorectic, virucide, antibacterial, fungicide, protozoacide, nootropic, ortucide, antibacterial, fungicide, protozoacide, nootropic, antiarthratic, antihiflammantory, dermatological, antiarthratic, antihiflammantory, dermatological, antiarthratic, antihiflammantory, dermatological, antiarthratic, antihiflammatory, dermatological, antiarthratic, antihiflammatory, dermatological, antiarthratic, antihiflammatory, dermatological, antiarthratic, and antibidases in gene therapy. The polypeptides, nucleic acid molecules and antibodies are useful for associated with a human disease, preferably a NOVX-associated disorder.

The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, contacted and antibodies are useful for treating, preventing or diagnosing diseases (viral, bacterial, fungal, contacted disorders), contacted disorders, contacted disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        helminthic, and protozoal), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, epilepsy, immune disorders and parkinson's disease, epilepsy, immune disorders as the contextrictis), haematopoietic disorders, inflammatory skin disorders, asthma, and various dyslipidaemias. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NoVX substances for use in therapeutic or diagnostic methods. The nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ಹ

polypeptides of the invention show homology to certain known human proteins: NOV1a-1t show homology to fibroblast growth factor receptor 4 (FGFR4); NOV2a shows homology to complement factor I precursor; NOV3a shows show homology to matrix metalloproteinase-15 precursor; NOV4a shows homology to matrix metalloproteinase-15 precursor; NOV4a shows homology to T-lymphocyte surface antigen Ly-9 precursor; NOV6a-6m show homology to fibroblast growth factor-21 (FGF-21); NOV7a-7c show homology to fibroblast growth factor-21 polypeptide variant; NOV8a-8g show homology to antileukoproteinae 1 precursor; NOV9a-91 show homology to LIV-1 protein; NOV10a shows homology to nuclear hormone receptor NOR-1; NOV11a-11j show homology to transmembrane protein-11ke; NOV12a-12c show homology to beta-necendorphin chancements. The present sequence represents a NOVX polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; fibroblast growth factor; FGF; zFGF11; chromosome 19; restenosis; proliferation; mesenchymal cell; osteoblastic lineage cell; osteoporosis; chromosomal disorder; chondrosarcoma; atherosclerosis; obseity; fracture; bone formation; diabetes mellitus; neural cell development; angiogenesis; amyotrophic lateral sclerosis; cerebrovascular stroke; neuropathy; ulcer; congenital disorder; wound healing; cardiac function; glomerulonephritis; surfactant production; anorecitc; ischaemia; neogenesis; hypertension; cytostatic; vasotropic; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel zFGF11 polypeptide and polynucleotide, a member of fibroblast growth factor family, for stimulating proliferation of mesenchymal, osteoblastic lineage cells and treating diabetes, obesity, osteoporosis,

                                                  The present sequence is human intropused growth ractor.

ZFGF11 protein. ZFGF11 game is located on chromosome 19. ZFGF11 is useful for stimulating proliferation of mesenchymal cells, osteoblastic lineage cells. ZFGF11 is useful for identifying chromosomal disorders associated with abnormal expression of ZFGF11 protein. ZFGF11 is also useful for stimulation, inhibition or proliferation of myocytes, smooth muscle cells addipocytes, choracytes, neural tube-derived stem cells, prostate-cells and neuronal progenitors, pancreatic cells, fractures, certherocals, restencais and obseity. Stimulation of osteoblasts cresults in bone formation useful for treating bone defects, fractures, ceteporosis and other deficiencies in bone structure and formation.

CC STGF11 is useful for treating disorders associated with diabette containing, neural cell development or degeneration, amyotrophic lateral sclerosis, cerebrovascular stroke, neuropathy associated with lack of maintenance of neuronal development, promoting angiogenesis and wound healing, for revascularisation in eye, complications related to poor circulation such as diabetic food ulcers, improving cardiac ceduce damage to the tissue caused by ischaemia or ischaemia-reperfusion cevents, particularly in the heart or brain and for inducing skeletal cevents, particularly in the heart or brain and for inducing skeletal cereating of systemic and pulmonary hypertension. Antagonists of zFGF11 cere inhibiting disorders associated with kidney epithelium

The invention relates to one hundred and twenty two nucleic acids encoding PRO polypeptides. The sequences of the 122 PRO polymucleotides encode human secreted proteins. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating a PRO related disorder. The PRO polypeptides are useful for diagnosing tumours, especially lung cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or liver tumour. The PRO polypeptides are useful for stimulating the proliferation of, or gene expression, in pericyte cells, for stimulating the release of tumour necrosis factor-alpha from human blood, is timulating the release of tumour necrosis factor-alpha from human blood, for stimulating the proliferation of normal human dermal fibroblast cells. The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. AAU83592-AAU83713 represent human PRO protein sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         One hundred and twenty two nucleic acids encoding PRO polypeptides, useful for treating a PRO related disorder and for diagnosing tumors such as lung cancer, colon cancer, breast tumor, prostate tumor, rectal tumor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; fibroblast growth factor; FGF; zFGF11; mesenchymal cell; FGFRIIIc; osteoblastic lineage cell; diabetes mellitus; neuropathy; neural cell development; amyotrophic lateral sclerosis;

    /note= "Mature fibroblast growth factor homologue,
zFGF11. This sequence is specifically claimed in claim 4"

                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated human polypeptide (1) for zPGF11 (a fibroblast growth factor), and the encoding polymucleotide (11). (1) and (11) are used in methods of the invention stimulating proliferation of mesenchymal cells, detecting the presence of zPGF11 in a biological sample, detecting the presence of FGFRIIC in a biological sample and estimulating proliferation of osteoblastic lineage cells. The polypeptides, nucleic acid and/or antibodies of the invention may be used in treatment of disorders associated with diabetes mellitus, neural cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         development or degeneration, amyotrophic lateral sclerosis, cerebrovascular stroke, neuropathy associated with lack of maintenance of neuronal differentiation, and congenital disorders of the nervous system or lack of neuronal development. Molecules of the invention may also be useful for improving cardiac function and for promoting wound healing of the epidermis. The present sequence represents the amino acid sequence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; extracellular messenger; neurological disorder; epilepsy; XMES-3;

The present invention relates to new extracellular messenger polypeptides and polynucleotides encoding them. XMES is useful in the diagnosis, treatment and prevention of neurological disorders (e.g. epilepsy, stroke, or Alzheimer's disease), autoimmune/inflammatory disorders (e.g. epilepsy, cardined immune deficiency syndrome, AIDS, Addison's disease, or allergies), developmental disorders (e.g. renal tubular acidosis, anaemia or Cushing's syndrome), endocrine disorders (e.g. hypophysectomy, ancurysm or vascular malformation), and cell proliferative disorders (e.g. cancer), and in the assessment of the effects of exogenous or compounds on the expression of nucleic acid and amino acid sequences of extracellular messengers. XMES may also be used in the treatment of viral, bacterial, fungal, parasitic, protozoal and helminthic infections, trauma, disorders associated with hypopituitarism, hyperthyroidism or gonadal steroid hormones, and pancreatic disorders such as type II diabetes mallitus. The XMES may be used for somatic or germline gene therapy. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the isolation of novel human PRO polypeptides, and the polynuclectide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynuclectides are useful for preparing a medicament useful in the diagnosis and treatment of tumours. Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ABUS0739-ABUS0860 from represent the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at seqdata.uspto.gov/psipsplDEDILTY.html

The invention describes an isolated nucleic acid molecule comprising a sequence with at least 80% identity to: (a) a nucleotide encoding any of 122 PRO (secreted and transmembrane) polypeptides whose sequences are fully defined in the specification; or (b) any of 122 nucleotide control or (b) any of 122 nucleotide sequences having e.g. 4834, 2504 or 1759 bp fully defined in the specification; or the full length coding sequence of any these 122 nucleotide sequences. The PRO polypeptides or polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are particularly useful for detecting tumour, rectal tumour, colon tumour, breast tumour, prostate tumour, rectal tumour, or liver tumour) in a mammal, for stimulating the release of TMR-alpha from human blood, for stimulating the proliferation or differentiation of chondrocyte (cells, for stimulating proliferation or differentiation of chondrocyte cells, for stimulating proliferation or differentiation of chondrocyte (cells, for stimulating proliferation or differentiation of chondrocyte (colls, for stimulating proliferation or differentiation) or various bone and/or cartilage disorders (e.g. sports injuries or arthritis), or wounds. The PRO polypeptides are useful in drug screening, particularly as targets of the therapeutic intervention in these diseases. The PRO polypeptides are useful as molecular weight markers, or for chromosome contenting libraries of human cDNA, genomic DNA or mRNA. The PRO genes may also be useful in gene therapy, particularly for replacing a defective contents and propertice of a novel human secreted and the transmembrane PRO polypeptide sequence of a novel human secreted and and contents and propertices of a novel human secreted and and contents and not and sequence of a novel human secreted and and contents and not and sequence of a novel human secreted and and contents and not and sequence of a novel human secreted and and contents and not and the propertices.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes one hundred and eighty seven nucleic acids encoding novel human secreted and transmembrane (PRO) polypeptides. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating or diagnosing a cardiovaccular, endothelial or anglogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, agerelated macular degeneration, atheroselerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour anglogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. This is the amino acid sequence of a novel human secreted and transmembrane PRO polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gerritsen ME, Goddard A, Godowski PJ;

ABP96156;

```
The present sequence represents human fibroblast growth factor 21 (FGF-21). FGF-21 is located to chromosome 19, more specifically to 19q13.1-qter. The present invention describes a method for treating a mammal exhibiting type 2 diabetes or type 1 diabetes, or treating a mammal cooksity which comprises administering to the mammal a composition cooksity which comprises given in ABP96156. Also described: (1) inducing an increase in glucose uptake in adipocyte cells by administering FGF-21 to induce an increase in glucose uptake; and (2) administering medicament for treating type 1 diabetes, type 2 diabetes or obesity in a mammal using FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 having 95% amino acid sequence identity for treating a mammal for obesity. The method is preferably useful for treating humans exhibiting type 1 or type 2 diabetes, and for treating domestic animals for obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: AREUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT PAPLICATION NUMBER: US/09/252,991A
CURRENT PILING DATE: 1999-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 28391
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GENERAL INFORMATION:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 7, Al

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
